MANUEL MURILLO SÁNCHEZ

Juarez, Chihuahua, Mexico | manuel1307ms@gmail.com | Portfolio

Java Backend Developer | Business-focused | Knowledgeable in backend design and optimization

TECHNICAL SKILLS

JAVA

Frameworks and libraries:

Spring Framework (core), Spring Boot, Spring Web, Spring Validation, Spring Security, Spring JPA, Spring AI, Hibernate, Lombok, MapStruct.

Other Java technologies:

Java Swing, JavaFX.

Databases and migrations:

MySQL, SQLite, Flyway.

Data formats:

JSON, XML, YAML.

Authentication and security:

JWT, OAuth, Bucket4j.

Build and dependency management:

Maven.

Testing and QA:

JUnit (unit testing), Mockito (mocking), Integration Testing, Spring Test / Spring Boot Test.

Documentation:

Swagger / OpenAPI.

DevOps, version control and deployment:

Docker, Git / GitHub, CI/CD (GitHub Actions), deployment on Vercel and Render.

Frontend and UI technologies:

React, Astro, Tailwind CSS, HTML, CSS, JavaScript / TypeScript.

EXPERIENCE

BUFONIO – Feedback Software | Demo: https://bufonio.vercel.app

End-to-end development of a SaaS solution designed to improve organizational culture through 100% anonymous communication channels and AI-powered data analytics.

- AI-Powered Feedback Transformation (Spring AI): I implemented a natural language processing engine using Google Gemini to filter out toxic content in real time and turn criticism into actionable strategic advice.
- Advanced Security and Session Management: I designed a robust authentication system based on Spring Security and JWT, implementing a strategy using access and refresh tokens to ensure secure sessions and enhance the user experience without compromising data integrity.
- Backend Architecture (Java and Spring Boot): Building a high-performance API by leveraging the latest Java capabilities for efficient backend process management.
- Traffic Control and Protection: Implementation of rate limiting using Bucket4j to prevent API abuse and ensure service availability in the event of potential attacks.
- Data Management and Traceability: Persistence modeling with MySQL and Spring Data JPA, using Flyway for version control and automated database migrations.
- Optimized Hybrid Frontend:
    - Astro: A high-speed landing page (with optimized Core Web Vitals) designed to drive conversions.
    - React: Dynamic admin panel for user management and viewing AI-generated insights.
- DevOps:
    - Backend: Automating deployment on Render using Docker.
    - Frontend: Hybrid architecture using Astro (landing page) and React (app), deployed on Vercel.

EDUCATION

Quick Learning - English course – B1 | **University of Xalapa** - International Business | **CONALEP Potrero 103** - IT Technical
